

Survey of Nurses 2004

RN Survey Instrument and Response Frequencies for Nurses Employed in the North Central Health Service Area¹

The Michigan Center for Nursing conducted a survey of licensed nurses in 2004 to collect data on their employment status, geographic distribution, age, plans to continue practicing, work setting, practice area, education, gender, and racial/ethnic background. This report presents the survey responses for registered nurses who entered a north central ZIP code for their primary place of employment. There were 309 surveys returned from RNs employed in the north central health service area, yielding a margin of error of ± 5.4 percent with 95 percent confidence for data for RNs in this health service area. Comparison of data for different health service areas is not recommended because the number of responses and corresponding margin of error varies among health service areas.

A map of the health service areas can be found in Appendix A. The complete report, *Michigan Center for Nursing Survey of Nurses 2004*, presents findings for the Michigan population of nurses as a whole and is available online at www.michigancenterfornursing.org.
